

SPK Public, Private and Hybrid Cloud Solutions

Get your application or infrastructure platform up and running and managed in the cloud **rapidly**, with SPK's high tech, high touch care.

Thousands of companies have discovered the ease, efficiency, and hassle-free world of cloud computing. SPK partners with key Cloud vendors AWS, Microsoft Azure, and Google to provide secure and reliable cloud hosting for engineering and business applications. You can enjoy a quick start up of your cloud platform by SPK's highly experienced cloud engineers. There is no need to take valuable time from your IT staff to acquire equipment, take data center space, or struggle to learn and manage your cloud platform.

Our Cloud Services include infrastructure, platform, and application managed services in a public, private, or hybrid cloud environment, for a fixed, predictable, easy to budget monthly price.

- Guaranteed Service Level Agreements
- Complete monitoring, alerting, and remediation of the solution environment, 24x7
- Cloud hosting at AWS, Microsoft Azure, or Google.
- Infrastructure-as-a-Service with redundancy and HA if required
- Easy to manage self-serve options
- Constant attention to cloud automation and orchestration
- Reliable, consistent images and image management
- Performance troubleshooting
- Log Review and Management
- Database DBM configuration management and optimization
- Networking administration and management
- Rigorous cybersecurity policies

Key Benefits

- **Reduce costs:**
Eliminate the in-house IT responsibilities, costs, and capital equipment associated with infrastructure and platform management; free your IT team to focus on more strategic initiatives; keep your applications running smoothly at a predictable cost
- **Speed time to value:**
Have a functional cloud platform ready in just a few days; eliminate the need to procure hardware, operating system licenses, or database licenses; reduce IT project timelines
- **Improve reliability:**
Protect your long-term cloud investment by keeping the solution consistently managed by experienced SPK engineers

Cloud Services Continued

- Compliance with various regulatory body requirements, including HIPAA, FDA 21 CFR 820
- Connectivity and integration with customer on-premises LDAP/AD services
- Connectivity and integration with customer on-premises applications
- Application Dev, Test, Training, Staging, and Production instance and refresh management
- DevOps automation and management
- Automated monitoring, alerting and remediation of platform issues
- Data Backups and Monthly Restore Verification
