

LicenseMiner: The smart way to take back control of your Engineering software licenses.

Overview

LicenseMiner is the smart way to monitor your shared Engineering software licenses -- allowing you to analyze usage, generate reports, and reduce costs. Cloud-based LicenseMiner provides an easily deployed, maintained, low-cost environment. **With its 5-minute setup time and \$10/month starter package**, why wouldn't you adopt LicenseMiner?

LicenseMiner's intuitive dashboard presents usage data that lets you quickly solve license distribution/sharing problems, and enables long term analysis to improve manager budget planning.

Maybe it's time you asked yourself some hard engineering software questions. For instance, do you:

- Suspect you're wasting money by over-buying software licenses ?
- Worry a few engineers "hog" all available licenses for non-priority projects -- at the expense of your other engineers, who can't complete key tasks?
- Find it difficult to manage your software budget, or to plan in advance the best time to purchase new licenses? Get blindsided that there are insufficient licenses during peak usage times?
- Need insight into the identities and usage patterns of engineering users?

If you answered yes to any of these questions, you should consider a simple, streamlined solution. We suggest looking into LicenseMiner, a new cloud-based license management and reporting tool.

LicenseMiner provides real-time and historical views of Engineering software license usage. You access relevant information via an intuitive, user friendly dashboard. LicenseMiner empowers control of all things licensing related -- and at a subscription cost that beats its competitors.

LicenseMiner Key Features

The tool enables you to:

- Identify what software licenses each of your engineers is using, via one, easy-to-read, comprehensive dashboard.
- Predict exactly when you must purchase new software licenses.
- Monitor all popular engineering applications -- Cadence, Mentor Graphics, Synopsys, SolidWorks, PTC, and more.
- Access its features by purchasing a monthly subscription that enables you to access it anytime, anywhere, via the cloud.
- Analyze/compare license usage among user groups/teams.
- Identify the most costly incidents of license "hogging" and allocate licenses solely on the basis of genuine need, justifiable by the value of the project.
- Quickly view if any license servers are down.
- Produce graphs justifying your overall license budget allotment.
- Receive alerts when license usage is at full (or exceeded) capacity.
